EXPERIENCE

BLOOM (YCS21) | SOFTWARE ENGINEER

October 2021 – December 2021 | San Francisco, CA/U.S. (Remote)

- Singlehandedly led the design/development of a multiplayer stock market game for 12,000+ users to learn about investing without risking real capital
- Built the functionality to make accounts, create games, buy/sell stocks, and track real-time performance using TypeScript, Next.js, Node.js, and Firebase

KNOWT | SOFTWARE ENGINEER

January 2020 – December 2021 | Lewes, DA/U.S. (Remote)

- Achieved a 64% decrease in bounce rate from the web app over 2 years by using Next.js to develop four entirely new design iterations
- Increased web traffic by 4,000 new users/month (doubled Lighthouse SEO score) using JSX to fix bugs and develop major improvements to site speed

TRADEVIEW | FOUNDER

May 2020 - October 2020 | North Brunswick, NJ/U.S. (Remote)

- Engineered an interactive web app with over 2,500 daily active users using Flask, HTML, and JS that displays hundreds of live stock market metrics
- Attained 10,000+ hours of usage on a Flask/Heroku REST API containing 50+ routes with data on stock news, ratios, signals, and recommendations

FINX | SOFTWARE ENGINEER

July 2020 – September 2020 | Virginia Beach, VA/U.S. (Remote)

- Accomplished a 32% higher user 3-week retention rate by rebuilding the company's financial services web app with React, Tailwind CSS, and Node.js
- Implemented a stock news sentiment analysis model with nltk and a daily poll functionality for 10,000+ mobile app users using React Native

GINI INVESTMENTS | SOFTWARE ENGINEER

July 2020 – August 2020 | Virginia Beach, VA/U.S. (Remote)

- Reached an average 5:1 profit/loss ratio (44% win rate) with an Alpaca API algorithmic swing trading bot using technical and fundamental analysis
- Expanded user investments by over 55% by recreating the web app with Next.js and Node.js for users to learn about and use the company's services

NJIT | QUANTITATIVE ANALYST

April 2019 – August 2020 | Newark, NJ/U.S. (Remote)

- Automated a model to recognize undervalued stocks through analyzing the statistical distributions (KDE, student's t) of 5,000+ stock returns with Scipy
- Collected 10,000,000+ stock beta/alpha values from over 20 years using Pandas to identify how they change during market corrections vs. uptrends

PROJECTS

QUANTITATIVE FINANCE:

- Sole contributor to GitHub repository with 250+ Python programs related to finding stocks and improving investment performance (400+ Stars, 100+ Forks)

COOKBOOKCV:

- Built a mobile app with Swift, OpenCV, and Flask that allows users to take a picture of their groceries and get recommended recipes within 6 seconds

INSURGUARD:

- Developed a web app with React and Flask that allows users to compare, contrast, and apply for natural disaster insurance insurance plans in one streamlined platform
